How to run Travelly app.

1) Install Python

2) pip install the following:

```
pip install -U Flask

$ pip install psycopg2
```

3) Install postgres DB - https://www.postgresql.org/download/

4) check postgres install by running psql –version in terminal

psql --version

5) populating the data base

In the project files there will be a file called DB_seeder.py and a file called password.txt

Open password.txt and enter your postgres password.

The app uses the default postgres username: postgres

Now run the DB_seeder.py file.

6) Run travelly app by running python Server/app.py. navigate to http://127.0.0.1/home to see the homepage.
